

	Title / Summary PDF	Steps to Reproduce PDF	Expected vs Actual PDF	Severity PDF	Suspected Cause PDF
1	Main production link demo.realworld.io returns a 404 crash screen.	1. Open a browser window. 2. Navigate to https://demo.realworld.io.	Expected: The standard Conduit blogging landing page loads. Actual: Server shows an AWS XML error: Code: NoSuchBucket.	Critical	The S3 static hosting bucket on AWS was accidentally deleted, renamed, or disconnected from the server DNS routes.
2	Core UI Styling fails to render on active registration modules.	1. Navigate directly to the live mirror: https://react-mobx.realworld.io/#/register.	Expected: Page displays styled, structured forms. Actual: App renders raw unstyled text inputs and default bullet points.	High	The application is referencing a broken path for its main CSS stylesheet, or the assets server is down.
3	Mislabeled button text on User Registration form.	1. Access the register screen (/#/register). 2. Observe the text on the final submit button.	Expected: Button should read "Sign up" or "Register". Actual: The action button is labeled "Sign in".	Medium	A developer copy-pasted the code from the login component to build the register component but forgot to alter the text string.
4	Form submission handler does not process requests.	1. Input credentials into the registration fields.	Expected: Account creation finishes or gives	Critical	The click event handler triggers

		2. Click the bottom action button.	an inline validation alert. Actual: The UI freezes entirely with no feedback.		network operations that terminate instantly due to a non-responsive API endpoint address.
5	Network requests to backend endpoints blocked by browser CORS policy.	1. Open the browser DevTools Console (F12). 2. Attempt a standard authentication action.	Expected: Server responds with standard JSON web token data. Actual: Browser errors trigger: net::ERR_FAILED with missing Access-Control-Allow-Origin headers.	Critical	The remote backend API server is missing global cross-origin access rules required to process requests originating from modern testing mirrors.
